Misun Min
Argonne National Laboratory

Subject: Argonne commitment to participation in project Foundation Models for Automated Design of Energy Flow Systems for DOE Funding Opportunity DE-FOA-0003612.

Dear Misun Min,

On behalf of Argonne National Laboratory, I am pleased to confirm the laboratory's commitment to participating in the project mentioned above, which is led by Argonne National Laboratory, and which is proposed in response to DOE funding opportunity, "The Genesis Mission: Transforming Science and Energy with AI".

Argonne commits to participating as described in the proposal. Specifically, Argonne will develop an AI-driven design and control framework for energy-relevant fluid flow systems using training data from the high-fidelity simulation codes, Nek5000/RS. This effort will include building foundation models capable of predicting performance and durability metrics under varying operating conditions and geometric parameters and demonstrate low-cost real-time prediction for representative energy components.

I have the authority to commit Argonne to participate in the proposed project. Argonne's participation is conditional upon availability of funding and DOE's approval of the laboratory's participation.

Sincerely,

Sean Liam Jones
